

# ***Speedtech*** **PERFORMANCE**

**Press Release: 04/20/23**

Featuring exceptional performance from advanced geometry design, with the same principals as our popular ExtReme series, ExtReme-XS offers 20% weight savings and integrated brake cooling ducts for Gen 1 & Gen 2 GM F-Body and full frame for C2 Corvette.

## **Speedtech Performance LLC. debuts ExtReme/xs Sub Frame for Camaros and Full Chassis for Corvettes**

Saint George, Utah — Speedtech Performance is excited to announce an advanced ExtReme-XS Sub Frame for 1<sup>st</sup> and 2<sup>nd</sup> Gen. GM F-Body and an ExtReme-XS full Chassis for Corvette C2. This new product and name, XS, builds on the ExtReme subframe already massively popular with the Pro Touring and custom car communities. The ExtReme-XS Sub Frame for Gen 1 & 2 F-Body is 20% lighter than the ExtReme Sub Frame and boasts integrated brake cooling ducts.

The ExtReme-XS Front Subframe (EFSF-XS), delivers the ultimate performance and control proven in our

award-winning and race proven ExtReme Sub Frames and Chassis'. The EFSF-XS provides nearly zero bump steer, fully adjustable alignment angles, and a sealed maintenance-free wheel bearing. The EFSF-XS features Speedtech Performance's industry exclusive spindle forged from 7075 Aircraft aluminum and a dual ram power rack and pinion. No body modifications are necessary to fit a 315/30/18 tire upfront while still retaining a 30-degree steering angle. The EFSF-XS is a removable bolt-in component of the Uni-Body that replaces the stock O.E. Sub Frame. The Speedtech Performance EFSF-XS offers thoughtfully engineered performance and is significantly lighter than the ExtReme Sub Frame.

GM Gen 1 & 2 F-Body's and C2 Corvettes using Speedtech Performance's ExtReme-XS will get all the performance our customers expect from Speedtech Performance with the added performance benefit of a 20% reduction in the sprung weight.

Speedtech Performance is committed to delivering superior performance solutions for Pro Touring enthusiasts who demand the best. With a focus on precision engineering, advanced materials, and cutting-edge technology, we create products that exceed expectations and deliver unparalleled results. To achieve the highest quality results, we rely on our team of experienced engineers, state-of-the-art manufacturing facilities, and rigorous testing and validation processes.
